15.07.2013

Our research project entitled:

"Integration of novel mouse models to advance understanding of epidermal proteolysis in rare genetic skin diseases such as the Netherton Syndrome-Basic and translational aspects" [ERADISK5]

has been approved for funding in terms of the Greece-France Bilateral Cooperation 2013-2015.

The study will be performed as a collaboration between the

1. Department of Pharmacy (PI: Assoc Prof G Sotiropoulou) and
2. Fondation Imagine (PI: Prof Alain Hovananian) and Hôpital Necker enfants maladies, Université René Descartes Paris 5; Inserm U781.
